As part of Think Before You Click, the office of information technology is hosting several panel discussions to help faculty and staff understand security issues in more depth. All discussions are informal and led by participants from a variety of backgrounds. UNLV personnel will share their real-life stories about security problems and technicians will offer their best advice for solutions. The more seminars you attend, the greater your chance of winning one of three laptop giveaways.

OIT will offer plenty of goodies at every seminar:

- Free anti-virus software
- Free lunch
- Chances to win a laptop
- Free advice you can use at home & work

CAMPAIGN SEMINARS All classes are in CBC-B117.

Security: Who Cares?

April 6th 11:30 – 1:00 (lunch 11:30-12)

Attend this session if you have ever thought “I don’t have anything important on my computer” or “I think I know what to click on” or “I feel fairly safe using my computer.”

In less than 18 months, over 750 UNLV employees have been victims of cyber crimes and a few have agreed to share their stories. Technicians will share their expertise about malware, viruses, phishing, and many other scams that hide behind links. This class is an introduction to information security.

How to Secure Your Office Computers

April 13th 11:30 to 1:00 (lunch 11:30-12)

How do you secure computers that are used by several people in the office, including students and staff? What is the best way to share files and access systems like SIS and Advantage? What type of games and programs should users access? At this seminar, OIT will provide several resources for managing office desktop computers.

Keep Student Data Safe: Lessons Learned from 2005 Server Breach

April 20th 12:30 to 2:00 (lunch 12:30-1)

College campuses have become attractive for cyber criminals looking for data. At UNLV, we need to be sure that student and personnel data is kept out of the hands of criminals. Join administrators and staff who share the lessons they learned from the security breach in spring of 2005. Panel members will answer such questions as: What should every administrator or director know about data security? How much student data should be stored in databases? Who should be given access to systems like SIS or HRMS? How should the employee identification number be used on campus?

Is your computer slow?

April 27th 11:30 – 1:00 (lunch 11:30-12)

Stop by this seminar and we’ll tell you why. Slow computers are usually suffering from the damages of malicious software. To avoid losing important files and data, attend this seminar to learn why your computer is slow, how to prevent it from crashing, and how to back up your files just incase.
