ORACLE – BACKEND SOFTWARE DEVELOPER

Posting ID: [Company Website: www.pringlio.com/job/1022]
Company: Oracle
Position Type: Full-Time
College Major(s): Computer Science

OVERVIEW
The ideal candidate must have passion for solving complex and interesting problems in the area of distributed computing, high volume transaction processing and large scale system design. Our success requires us to process over 500 million transactions a day in a SaaS environment. We are seeking individuals who can handle the challenges and opportunities of developing software that operates at this scale while expanding our functionality to even further the lead that Responses has over the competition. Software engineers will work on many different exciting projects and assume varying responsibilities.

Responsibilities
- Design and develop new product features and enhancements with high quality
- Work with product management to define new product requirements
- Acquire knowledge of existing code and refactor code as needed to meet the needs of the evolving product requirements
- Write detailed design documents and participate in design reviews
- Perform unit tests and participate in code reviews
- Work with the back-end, platform, data services and QA teams to deliver high quality product releases on time

Qualifications
- BS/MS/PhD in computer science or other relevant technical degree
- 2+ years of experience in application development using Java/J2EE technologies
- Demonstrate analytic and problem-solving skills, particularly as it relates to application design, development and infrastructure
- Excellent object oriented programming, unit testing, debugging and code organization skills
- Familiarity with Spring, Hibernate, JMS, Test NG, relational databases and SQL
- Excellent communication skills

Experience Preferred – 2-5 years
