This event qualifies for the
Lee Business School Medallion Program

Topic: Fostering an Innovative Culture to Drive Customer Success

One might say that Brad cannot sit still, having grown up in a military family with frequent postings, and later forming a journey of experiences in technology roles in several companies in Canada and the United States. He’s an inquisitive engineer, always asking “Why?”, learning, and motivated by delivering value to customers through the power of high-performance team innovating every day. Today he leads an engineering organization in the Cloud SaaS space, where every engineer is “doing the best work of their careers.”

A “how it works” geek, Brad holds a Bachelor of Engineering, Computer Systems degree from Carleton University (Ottawa, Canada), and over 30 years of experience engineering products for the telecommunications, enterprise, and cloud computing industries. For the last 10 years he has held executive leadership roles, and currently leads an infrastructure engineering organization at Salesforce, with a passionate focus on innovation, customer trust and building strong customer-focused teams.
