Summary Analysis of CPCE Data: Four subscales were identified as slightly lower than the national mean, but are not a big difference. Given that this is the first year that we have offered the NCE, we understand that there will be a time for studying adjustment. We will continue to monitor these scores over a two-year period to see if these scores rise.

Program modifications based on data: Continue to offer NCE or CPCE as exam option and continue to monitor scores in future years.

Summary of Results

Analysis of KPI Assignments: All KPI assignments met the benchmark of at least 80% of students meeting or exceeding outcome measurement. This is excellent news. We will stay the course and continue improving and fine-tuning our courses. We have specifically discussed updating course descriptions and course names to best reflect the content in future years.

Analysis of CPCE Data: Four subscales were identified as slightly lower than the national mean, but are not a big difference. Given that this is the first year that we have offered the NCE, we understand that there will be a time for studying adjustment. We will continue to monitor these scores over a two-year period to see if these scores rise.

Analysis of PPC Data: All PPC outcomes met the benchmark of at least 80% “meeting expectations.” We will continue to attune to student needs and assess their dispositions.

Analysis of Program Objectives overall: Faculty will continue to work to improve the program, including discussing fine-tuning our course sequence, shifting courses to best meet the needs of students and their sites. As we continue to grow our PhD program, we will continue to seek ways of engaging the programs together.

Program modifications Based on Data: None.
