Science Education
MaryKay Orgill

Professor
Department of Chemistry and Biochemistry

• Ph.D., Chemistry, Purdue University
• Fellow, Royal Society of Chemistry
• Former Chair of the American Chemical Society Division of Chemical Education
• CHE 116, MaryKay.Orgill@unlv.edu
• https://www.unlv.edu/people/marykay-orgill

Areas of Expertise
• Chemistry Education
• Biochemistry Education

Research Summary:
I am interested in using qualitative research techniques to examine and improve undergraduate chemistry teaching and learning. Currently, this involves looking at how students understand concepts explained in chemistry classes, how they solve chemistry-related problems, how they visualize different chemical concepts, and how they use language to make sense of chemical concepts. I have also been involved in a number of projects that provide professional development opportunities to faculty and K-12 teachers.
Undergraduate Education

Kurt M. Regner, Ph.D.
Professor in Residence
School of Life Sciences

Teaching Approach
Challenge the students to take responsibility for their learning

Professor’s responsibilities
- Integrate concepts
- Explain the relevance
- Manage content
- Provide resources
- Evidence-based practices
- Active and engaging lectures
- Implement a variety of assessment
- Provide timely feedback
- Treat the students with respect
- Fosters Educational Equity
Active Learning

Writing, thinking and discussion in class

- Prior knowledge
- Deep processing
- New material

Low stakes methods
- Discussions
- Minute Paper
- Murkiest Point
- Draw and Explain
- Class Participation
- Think Pair and Share

- Meta-analysis of 225 studies
- Active learning improved exam scores by 6.0%
- Active learning resulted in increases of a half grade: C- to C
- Students were 1.5x more likely to fail in traditional lectures

Freeman, S., et al. 2014. Active learning increases student performance in science, engineering, and mathematics. PNAS 111(23):8410-8415
Biol 207 Phage Discovery (4 cr)

Bacteriophage biology is used as a model to introduce science students to the process of science, developing communication / collaboration skills and employing quantitative reasoning.

Course-based Research Experience

- Attracts students to STEM careers
- Improves freshman retention and graduation
- Largest gains are from students traditionally underrepresented in science

US needs 1 million STEM graduates for a competitive global economy

Research Experiences for Undergraduates
Mechanisms of Evolution

- 10-wk summer research internship
- Research opportunities for students underrepresented in science
- Professional development activities
- Raise public awareness of evolution as a critical component of science literacy
- Enhance UNLV research infrastructure

Abstract
This study examined students’ voluntary use of digital self-assessment quizzes as a resource for learning in a large anatomy and physiology lecture course. Students (n = 238) could use 16 chapter quizzes and four analogus unit quizzes to rehearse and self-assess knowledge. Most students (72%) engaged in occasional use of self-assessment quiz items; repeated use was uncommon (12%), as was lack of use (13%). Exam performance differed between quiz use groups. Quiz use improved exam performance more among students who entered the course with low prior knowledge of concepts from the prerequisite course. Cumulatively for all students and all exams, repeated self-assessment quiz users significantly outperformed occasional users (+7.5%) and non-users (+11.9%) on course exams. Incorporation of optional learning resources can enhance the learning success of students.

- Effects of skill training:

Can a Brief, Digital Skill Training Intervention Help Undergraduates “Learn to Learn” and Improve Their STEM Achievement?

Matthew L. Bernacki
University of North Carolina, Chapel Hill

Lucie Vosicka and Jennifer C. Utz
University of Nevada, Las Vegas

Students who drop out of their science, technology, engineering, and math (STEM) majors commonly report that they lack skills critical to STEM learning and career pursuits. Many training programs exist to develop students’ learning skills and they typically achieve small to medium effects on behaviors and performance. However, these programs require large investments of students’ and instructors’ time and effort, which limits their applicability to large lecture course formats commonly employed in early undergraduate STEM coursework. This study examined whether brief, digital training modules designed to help students apply learning strategies and self-regulated learning principles effectively in their STEM courses can impact students’ behaviors and performance in a large biology lecture course. Results indicate that a 2-hr Science of Learning to Learn training had significant effects on students’ use of...
Developing the Skill and Will to Succeed in STEM Scholarship Program

A primary goal of this scholarship program is to diversify and increase the number of students entering STEM professions.

• The School of Life Sciences welcomed the first cohort of 17 Succeed in STEM Scholarship recipients in 2019.
• Over $420,000 of scholarship support will be distributed across the lifetime of this 5-year program.
