OVERVIEW

SwiftOps is an operational performance company with individual experience of 16+ years in deepwater oil & gas exploration.

Roles and Responsibilities
Your responsibility will be to design and build an application that facilitates various multiuser workflows. The application has to be database based and will need to run on several tablets simultaneously while a local server will host the data. You will be working closely with our subject matter experts and will be transforming their years of hand-on experience into a strong and simple-to-use tool, and be responsible for the process from initial design through implementation to support and further improvement.

Education and Qualifications
Good understanding of and experience with the following:

- Database design
- GUI design
- Workflow design

How to Apply
Please send your Cover Letter and Resumes to hr@swiftops.us
