GES is accepting applications for a Geotechnical Engineer with at least 4 years of experience.

Roles and Responsibilities
Typical duties consist of planning, designing, and directing geotechnical engineering or construction testing/inspection projects by performing the following:

- Analyze reports, maps, drawings, blueprints, tests, and aerial photographs on soil composition, terrain, hydrological characteristics, and other topographical data to plan and design projects
- Perform geotechnical related analysis and calculations
- Prepare routine reports including geotechnical, selected backfill, pad certification, etc.
- Serves as a project manager on a variety of projects
- Marketing and client relations
- Mentors and trains staff

Education and Qualifications
Must have a B.S. in Engineering and local experience preferred.

To perform this job successfully, the selected candidate must have the ability to work well with others and individually. Must be able to develop working relationships with clients and participate in professional organizations, etc. Candidates should be a registered professional civil engineer or have the ability to obtain registration within 6 months.
