Continuous Improvement Engineer

**Posting ID:** [This will be from us.]

**Company:** Chelten House Products  
**Company Website:** www.cheltenhouse.com

**Job Title:** Continuous Improvement Eng.  
**Work Location:** 2970 Coleman St. North  
Las Vegas, NV  89032

**Position Type:** Engineering  
**Salary:**

**Job Start:** May 2016  
**Job End:** August 2016

**College Major(s):** Engineering  
**College Level(s):** Junior / Senior

**OVERVIEW**

**Roles and Responsibilities**
We are looking for someone with a passion for problem solving that can find unique solutions to challenging problems and to drive change in the factory. Utilizing practical continuous improvement tools you will identify and address performance bottlenecks and find ways to run processes better and faster than we are today. Working with all levels of plant personnel, you will help lead the plant's continuous improvement efforts. The goal will be to reduce waste and process losses, improve productivity and increase the operator's sense of ownership of systems. You will train and mentor team members in lean production principles and techniques to help build a culture of standards and continuous day-to-day improvement.

**Key focus areas**
- Efficiency Improvement planning & initiative implementation
- Loss/Waste Reduction planning and implementation
- Capacity Analysis
- Improving the KPI reporting and communication process

**Education and Qualifications**
- Emphasis in mechanical, manufacturing and/or industrial or similar discipline.
- Knowledge of LEAN manufacturing principles or Six-Sigma
- Must have the leadership, interpersonal and communication skills required to interact with all levels of plant personnel and be comfortable working with minimal supervision.
Preferred Skills

- Strong project management skills
- LEAN manufacturing principles or Six-Sigma
- Effectively communicate project status and organizational impacts to sponsors, delivery partners, and stakeholders using both written and oral communication
- The ability to rapidly assess, analyze, and quickly resolve complicated problems with little initial information or direction and with varying degrees of ambiguity.
