OVERVIEW
SGPS is an industry leader in staging, automation, and rigging technology for the entertainment industry. As a design engineer you will work within the engineering department to take designs from the conceptual phase to finished product.

Roles and Responsibilities
Roles and responsibilities include creating 3D models of designs, producing build drawings, and CNC programming for custom parts used in the design. Must be able to take ownership of design and follow it throughout the fabrication process.

Education and Qualifications
Candidates should be working towards or will have already acquired a degree in mechanical, civil, or entertainment engineering. Proficiency in Autodesk Inventor or Solidworks required.

Preferred Skills
Familiarity with or experience working in the entertainment industry. Interest in stage or machine design. Understanding of the fabrication process and CNC machining a plus.

How to Apply
Please submit resumes to: emily@sgps.net
