American Homes 4 Rent
As one of the country’s fastest-growing property management companies of single-family rental homes, American Homes 4 Rent has an exhilarating and fluid start-up culture and permanency of a well-founded corporation, rich with diversity. As pioneers in the industry, solidified by our place on Wall Street, American Homes 4 Rent (AMH : NYSE) is currently looking for qualified candidates. With a culture of unprecedented growth, quality and innovative collaboration, we are seeking personalities to complement our attributes.

The single-family rental home industry is in its infancy, and we need a talented individual to help execute our ideas and vision in the form of intuitive web applications. Our business strategy constantly evolves and we need a skilled team member to help us develop the right tools to optimize our operations. We are looking for a highly motivated and passionate programmer who loves to develop great software and solve complex problems.

Roles and Responsibilities
● Design, develop and implement web applications. This will include implementing new product features, enhancing and maintaining existing functionality, testing and tuning for performance, and building capabilities for application monitoring
● Participate in design discussions, review sessions and prototyping
● Collaborate between various user groups to translate user needs and requirements into application functionality
● Advocate industry best practices like continuous integration, continuous deployment, automated testing, etc.
● Build strong and lasting relationships with business and technology stakeholders while negotiating business requirements and priorities
Education and Qualifications

- Bachelors in EE/CS/MIS/Math/Physics, or other Hard Sciences, and minimum of 2+ years of related experience, or no degree / work in progress and 5+ years of relevant experience
- A true passion for programming, developing logical structures, and materializing ideas into deliverable
- 2+ years’ experience building applications in a production level environment using JavaScript, Python, Java, Ruby on Rails, or PHP
- Knowledge and experience in building scalable Node.js applications
- Experience building user interfaces, application front-ends, dashboards for end users
- Solid understanding of core JavaScript concepts
- Experience with popular front-end frameworks such as React, Angular, Ember, Vue.js, Ext.js, etc.
- Experience with build tools such as Webpack, Grunt, Gulp, Babel etc.
- Experience with test frameworks: Mocha, Jest, Nightwatch etc.
- Experience with HTML5, CSS3, Bootstrap and responsive design

Preferred Skills

- Understanding of cross-browser compatibility issues and ways to work around them
- Strong CS fundamentals: data structures, algorithms, object-oriented design etc.
  Organized, able to act independently, able to switch rapidly between different projects in a fast-paced environment
- Structured, organized, methodical thinker; Persistent, creative, tenacious work ethic.
- Excellent verbal and written communication skills
- Strong desire to learn and share knowledge with others
