OVERVIEW

Los Angeles-based startup Hyperloop One has made it its mission to build a rail system that levitates pods on magnetic skis and sends them through a low-pressure tube at 760mph. At a railway conference in Dubai, the startup showed the first images of the test track it has started building in southern Nevada, north of Las Vegas. Hyperloop has an agreement with Dubai Roads and Transport Authority to evaluate using the Hyperloop between Dubai and Abu Dhabi. 35 minutes north of Las Vegas, the local test track is going to be 500m (or about a third of a mile) long and 3.3m (almost 11ft) wide. Hyperloop hopes to do a public test in the track in the first half of 2017. Pods will carry passengers, and Hyperloop needs general student laborers to help with construction in Apex.

Roles and Responsibilities
General labor, experience on construction sites helpful, Confined Space Training will be mandatory.

Education and Qualifications
General labor experience, willingness to work, good attitude. This will be an experience you will not forget!

Preferred Skills

How to Apply
Send resumes and why you want this experience to Marian Mason at marian.mason@unlv.edu.
