OVERVIEW

Our vision is the generation of wealth through responsible mining—wealth for our owners, our people, and the countries and communities with which we partner.

In 2016, we produced 5.52 million ounces of gold at a cost of sales of $798 per ounce, and all-in sustaining costs of $730 per ounce. More than 75% of our gold production comes from the Americas region, including Argentina, Canada, Dominican Republic, Peru and the United States. The Company also has mining operations and projects in Australia, Chile, Papua New Guinea, Saudi Arabia, and Zambia. At the end of 2016, Barrick had proven and probable gold reserves of 85.9 million ounces (2.0 billion tonnes, grading 1.33 grams per tonne). Barrick was founded in 1983 by Canadian entrepreneur and philanthropist Peter Munk, and is headquartered in Toronto. The Company’s shares trade on the New York Stock Exchange and the Toronto Stock Exchange under the symbol ABX.

Roles and Responsibilities
The Systems Engineer Intern will have an opportunity for aligning theoretical knowledge with practical experience. This will be done by having the intern undergo a training program to gain a strong mix of business process knowledge coupled with outstanding technology capabilities. Through coaching and mentoring, the intern will gain solid experience in Mobile Device Management, Microsoft technologies with deep server and storage knowledge. The Intern will be involved in the rollout of Microsoft related project initiatives including Active Directory, Microsoft Exchange, Live Communication Server, System Center Operations Manager, System Center Configuration Manager and other Microsoft products. In addition, the System Engineer Intern will gain an understanding of the role that information technology plays and how IT can be deployed to serve the business in a global multi-site mining organization.

Key Responsibilities
• Learn the maintenance and administration of Microsoft Server products specifically Active Directory, Exchange, System Center Configuration Management and System Center
Operations Management.
• Maintain and support Microsoft cloud base solutions such as Azure and Office365.
• Coached and mentored to maintain Mobile Device Management system and servers for global users and multiple carriers and devices.
• Support and maintain the corporate infrastructure which includes all Windows servers
• Learn and support effectiveness of security solutions, including anti-virus solutions, and intrusion detection systems
• Create and maintain documentation as it relates to servers, backup and data center configuration.
• Following direction of the supervisor, conduct research on products, services, protocols, and standards to remain abreast of developments in the technology industry.
• Administer user accounts, permissions, and access rights
• Participate in Infrastructure improvement projects

Education and Qualifications
University or college student who is pursuing a degree in computer science or engineering.

Preferred Skills

How to Apply
