* The % Daily Value (DV) tells you how much a nutrient in a serving of food contributes to a daily diet. 2,000 calories a day is used for general nutrition advice.	

### Start with serving information.

This will tell you the size of a single serving and how many servings are in the package.

### Check total calories.

Do the math to know how many calories you're really getting if you eat the whole package.

### Limit certain nutrients.

Compare labels when possible and choose options with lower amounts of added sugars, sodium and saturated fat and no trans fat.

### Get enough of beneficial nutrients.

Eat foods with nutrients your body needs, like calcium, dietary fiber, iron, potassium and Vitamin D.

### Understand % Daily Value.

- The % Daily Value (DV) tells you the percentage of each nutrient in a single serving in terms of the daily recommended amount.
- To consume less of a nutrient (such as saturated fat or sodium), choose foods with a lower % DV (5% or less).
- To consume more of a nutrient (such as fiber or potassium), choose foods with a higher % DV (20% or more).
