AMERICAN SYSTEMS is currently seeking an Operational Test Engineer/Analyst. The position will support the Air Force Operational Test and Evaluation Center (AFOTEC) Intercontinental Ballistic Missile (ICBM) test team at Hill AFB, UT.

Roles and Responsibilities
Responsible for providing technical assistance of operational effectiveness, suitability, and combat capability evaluations. Work includes development of test objectives and plans, test execution, data collection and analysis, and reporting.

JOB DESCRIPTION AND DUTIES:

- Drafts operational test plans, reports, and various supporting documents and briefings
- Assists the Test Director in timely preparation of high-quality analysis across the varied test venues during all test phases
- Contributes to all facets of test design and planning using in-depth knowledge of system under test, AFOTEC test policies, and test range capabilities
- Attends meetings and conferences as required

Approximately 10-20 percent of time travel will be required to multiple government and contractor facilities as a test team representative.

Education and Qualifications
REQUIRED EXPERIENCE/SKILLS:

- Bachelor's Degree
- Operational Test and Evaluation experience
- Experience developing test plans and test procedures
- Proficient in use of Microsoft Office products
Preferred Skills

- 1 year practical knowledge of ICBMs
- Experience developing ICBM test plans and procedures
- Developmental Test and Evaluation experience
- Familiarity with systems requirements documents, identification of test capability requirements and shortfalls, supporting digital test tool development and associated tool training, refining test concepts and designs, and identification of test support resources needs (facilities, instrumentation, and personnel)
- Familiarity with Test and Evaluation Master Plans (TEMP) and Data Management and Analysis Plans (DMAP)
- Familiarity with current ICBM test plans, test procedures, data collection, analysis, and reporting
