

Do you have Parkinson's disease?

We are seeking participants for a research study to determine how exercise habits and certain genes might affect your balance and walking if you have Parkinson's disease.

Qualifications:

- You must have been diagnosed with Parkinson's disease by a neurologist.
- You must have no history of dementia.

If you qualify:

You will be asked to participate in a one-time session that will take about 45 minutes. You will be asked to provide information about your Parkinson's disease, your balance and how physically active you have been throughout your life. You will then participate in some tests of your balance and walking, and provide a DNA sample using a cheek swab.

Interested in participating? Questions?
